

Map-iT™ 4/3.3F CS Catheter with Guidewire

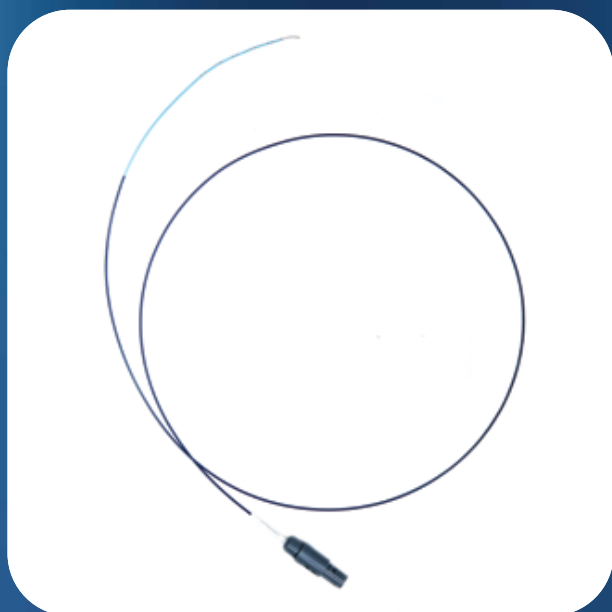

Map-iT™

Ventricular Tachycardia (VT)/ Atrial Fibrillation (AF)/ WPW Syndrome

Key Features

- Cannulate deep into the CS and its side branches to map VT
- Ideal for left-sided WPW cases to more precisely locate the site of the accessory pathway
- Provide mapping within the middle cardiac vein (MCV) for posteroseptal pathways
- Place deep within the CS to better pace to confirm isolation of the pulmonary veins (PVs)

* Insert into the CS using either a 6F AL (1.0, 1.5 or 2.0) guiding catheter† or SL3 8F guiding introducer from the inferior approach, or either an Amplatz Left I, II or III, Judkins Right or Multipurpose guiding catheter from the superior approach

Catheter Specifications

- 4/3.3F (0.052" / 0.0429")
- Guidewire Tip: 15mm / 0.032"
- Length: 75cm or 120cm
- Electrodes: 10 or 20 / ring electrodes 1mm width
- Electrode spacing: 2mm, 5mm, 2-5-2mm, 2-8-2mm and 2-10-2mm
- Curve type: S (straight)
